

PURE CLEAR

Puresan Pure Clear puts nature's elements to work to solve pool water issues the natural way.

Application

- Puresan commits to providing products with a positive eco-balance that respects the concept of “the correct dose” for the smallest ecological footprint possible whilst adhering to recent European standards for biodegradability.
- The cations will bind and floc together with magnesium and calcium in pools where the TDS (total dissolved solids) is high to render the water clear.
- After dosing the pool water, particles bind together and settle on the pool floor, resulting in clear water.
- These particles that have bound together can be vacuumed manually or be eliminated via the normal backwash and rinse maintenance process for your pool.

Available in 1 Litre bottles
