

HAND SANITISER

75% WHO

Puresan Hand Sanitiser 75% is a 75% WHO compliant, Isopropyl Alcohol, Hydrogen Peroxide and Glycerol hand sanitiser that prevents cross-contaminations and has an outstanding protection action on the skin.

Application

- The Novel Corona Virus (called SARS-CoV-2) is mainly spread to others via the transfer of virus-laden droplets from a person's mouth or nose.
- Aside from inhaling virus-laden droplets you can also get respiratory viruses, including SARS-CoV-2 by touching anything contaminated with the virus and then touching your face, in particular your mouth, nose and eyes.
- Puresan Hand Sanitiser is the ideal product for hand hygiene during a Pandemic such as Covid-19, giving you peace of mind as our product formulation is compliant with the WHO (World Health Organisation) directions and kills a broad spectrum of pathogens, including enveloped viruses, like Covid-19.
- The gold standard for hand hygiene and preventing the spread of infectious diseases remains washing hands with warm water and soap. Washing with warm water and soap removes oils from our hands that can harbour microbes. Remember to wash hands for at least 20 seconds as per WHO recommendations.
- Ensure total coverage of all skin on hands, allowing time to dry in order to give product optimal time to sanitise your skin. Re-apply after touching anything with your hands.

Available in 100ml Bottles and 5 & 25 Litre containers
