TO WHOM IT MAY CONCERN

Report on the effect and benefits of Purevet for animals:

On the 17 March 2015, Twiggy started showing signs of being ill. She had a slight nasal discharge and was coughing. We started an antibiotic treatment and followed it by using an antibiotic inj. The Vet then gave her another antibiotic treatment and an antihistamine inj.

We then followed the treatment with another course of antibiotics. After assessing her condition the Vet said that she had developed C.O.P.D. She had labored breathing, but she was still eating and functioning normally. We kept her confined and started her on natural immune system treatments for recovery.

On the 15 May 2015, Shane Dunford from Pure Water Solutions (Pty) Ltd. offered the product called Purevet. Purevet works on the natural balancing of the immune system by boosting the levels of copper, iron, silver etc. This enhances the body and aids in recovery. Purevet helps to combat all types of viruses or bacteria which attack the system.

We started Twiggy on 2.5ml per day for a week and then increased the dosage to 3.5ml per day. With the added treatment of 2 drops in her inhalation meds, we witnessed an improvement in her condition. We continued with the treatment until November 2015, when we reduced the treatment to 3 ml every other day. Her breathing improved dramatically and she was able to walk around and go off with the other horses. By December she was trotting out of her stable and continued to improve. From the 10th December we stopped the treatment.

To follow are photos taken in order 10th, 29th September, 26th October, 10th, 11th November, 11th December and Finally a photo of Twiggy to compare her condition taken in 2013.

Thank you to Shane Dunford and Purevet.

Your faithfully

Bridget James  
Manager
